

Moving the storage/ directory

The storage/ can be moved outside the web root directory to prevent unauthorised access to its contents via the web.

1. Recursively move the storage/ directory to the intended destination. For example:

```
mkdir -p /sp-  
storagemv /var/www/html/storage /sp-storage
```

2. Define the STORAGE_PATH environment variable:

```
STORAGE_PATH=/sp-storage
```
