

Widgets

Widgets are panels shown on the operator panel dashboard that should be used to give helpful data or tools to operators.

By default the table is sorted alphabetically by the widget name. Once the table has loaded you're able to change the sort column by clicking the up/down arrows:

- Down arrow: descending order
- Up arrow: ascending order

This action is only temporary and will disappear once the page has been reloaded.

It's possible to filter widgets based on their containing text and type:

1. Visit **Settings -> General -> Widgets** and click "Filter Results".
2. Search terms:
 1. **Name** - Partial search for the widget name, for example "vers" would find "Version Check".
 2. **Status** - Whether the widget is active, inactive or has an upgrade pending.
 3. **Description** - Partial search for the widget description.
3. The table will be filtered automatically as you enter search terms.

To activate a widget, please follow the following steps.

1. Visit **Settings -> General -> Widgets**.
2. Search for the widget you wish to activate (see [REDACTED]).
3. Click the 'Activate' link located on the left of the table.
4. The page will reload confirming the widget has been activated.

To deactivate a widget, follow the below steps:

1. Visit **Settings -> General -> Widgets**.
2. Search for the widget you wish to deactivate (see [REDACTED]).
3. Click the 'Deactivate' link located on the left of the table.
4. The page will reload confirming the widget has been deactivated.

Uninstalling will permanently remove the widget from the system, and it can only be recovered by re-uploading the files again. It would be recommended to only [REDACTED] the widget instead.

To uninstall a widget, follow the below steps:

1. Visit **Settings -> General -> Widgets**.
2. Search for the widget you wish to uninstall (see [REDACTED]).
3. Click the 'Uninstall' link located on the left of the table.
4. Tick the options and click on the button, "Yes, Delete Widget", that pops up confirming you would like to delete this widget, and it will now be uninstalled from the system.

To restrict or allow access to a widget, follow the below steps:

1. First activate the widget (see [REDACTED]) if you haven't already.
2. Go to **Settings -> Users -> Operator Roles** and select the relevant role.
3. Scroll down to the Widgets section and check/uncheck the widget as needed.
4. Make sure the same is done in any other roles as needed.
